

Diesel DPF Cleaning Toolkit

The JLM Diesel DPF Cleaning Kit has been developed for cleaning clogged diesel particulate filters and to prevent future repeated build-up of soot in the particulate filter.

The JLM Diesel DPF Cleaning Kit consists of a cleaning process which is divided into two steps: a deep cleaner and a flush. Both the fluids are distributed into the DPF by means of a tube with conical nozzle in to the hose of the front pressure sensor.

The JLM Diesel DPF Cleaning fluid step 1 dissolves the various contaminations and soaks the accumulated soot particles. Step 2, JLM Diesel DPF Flush, flushes out the substrate and also re-distributes the accumulated soot within the soot trap. After these two steps the DPF is now optimally prepared for a (forced) regeneration.

Benefits

- Developed solely for the professional motor mechanic
- Keep all DPF work in house no matter how complex
- Significant income earner for workshops

How to use:

Use For passenger cars fitted with diesel particulate filters (DPF/FAP) and light commercial vehicles with similar engines.

Direction: see instruction manual and instruction video's, professional use only.
